# QILA ERP

ENTERPRISE RESOURCE PLANNING

# The fortress for your business.

One configurable ERP for finance, sales, inventory, manufacturing, people and compliance. Installed on your own server. Shaped to the way you work.

Accounts & GST | Sales & POS | Inventory | Manufacturing | HR & Payroll | Workflows | Automation

A PRODUCT OF ABR

qilaerp.com

WHY QILA

# Everything an ERP should be. Nothing you have to give up.

Most business software makes you choose: complete or flexible, powerful or simple, convenient or in control of your own data. Qila is built so that you never have to.

### Complete

Accounting, tax, multi-currency, sales and point of sale, purchasing, multi-warehouse inventory, manufacturing, HR and payroll. One system, one database, one sign-in.

### Configurable

A whitepaper platform you shape without code: drag-and-drop forms, 38 field types, formulas, workflows, automation rules, reports and dashboards.

### Private

Installed on your own server. Your data, documents and backups never leave it. Two-factor sign-in, field-level permissions and a tamper-evident audit trail as standard.

### Ready on day one

Industry Qila Packs configure the platform for retail, distribution, manufacturing, hospitality, education, healthcare and services in an afternoon.

| 38 | 13 | 5 | 9+ |
|---|---|---|---|
| field types in the no-code Designer | permission actions for every role and record | approval modes, from single to quorum | ready-made industry Qila Packs |

> **“Configuration, not code.” Every screen, rule and report in Qila can be shaped by your own team, and every change is reviewed and audited before it goes live.**

THE PLATFORM

# One platform. Every process.

Every module shares one database, so a sale updates stock, accounts and tax in the same moment, and every figure can be traced back to its source document.

### Finance & accounting

Double-entry ledgers, bank reconciliation, fixed assets, cost centres, multi-currency and year-end closing.

### Sales & point of sale

Quotations to invoices, fast POS counters, price lists, credit control, returns and e-invoicing.

### Purchasing & procurement

Requests, RFQs with side-by-side comparison, purchase orders, approvals and supplier performance.

### Inventory & supply chain

Multi-warehouse stock, batches and serials, re-order planning, landed cost and transfers.

### Manufacturing

Multi-level bills of materials, work orders, production entries, scrap and costing.

### HR, attendance & payroll

Employees, attendance, leave and payroll with statutory deductions and bank advice.

### Work management

Inbox, tasks, recurring tasks, jobs, time logs and the team report.

### Insight

Report builder, dashboards, scheduled reports, threshold alerts and the live activity feed.

A SALE, END TO END

Quotation → Sales Order → Delivery → Invoice → Payment

COMPLIANCE & GLOBAL REACH

# Compliance, built in. Business, without borders.

Statutory returns are prepared from the same records your team already keeps, and the same platform runs in Arabic or English, in any currency, across companies and branches.

### India compliance

- GSTR-1 and GSTR-3B files for the GST portal
- GSTR-2B import and automatic matching
- E-invoice (IRP) and e-way bill data
- TDS on purchases, challans and Form 26Q data
- PF ECR, ESI files and salary TDS
- Compliance calendar with reminders and filing due dates
- Income-tax return–ready statements and depreciation

### Ready for the region

- Multi-currency documents with exchange gain and loss
- Arabic interface with full right-to-left layout
- Each person chooses their own language
- Bilingual print formats for invoices and documents
- Multi-company and multi-branch in one installation
- REST API and signed webhooks for integration

> **Every change recorded. Every figure traceable. Submitted documents are locked, and the audit trail is hash-chained and verified on a schedule.**

GSTR-1 · GSTR-3B · GSTR-2B · e-Invoice · e-Way Bill · TDS · PF · ESI · USD · AED · SAR · EUR · العربية

CONFIGURATION STUDIO

# Configure. Don’t code.

Qila puts the power of a software team in the hands of your administrator or Qila Expert. Every change is held as a draft, previewed, reviewed and audited before it goes live.

### Designer

Drag-and-drop forms with sections, columns and display conditions. 38 field types, child tables, formulas, numbering series and print formats.

### Workflows

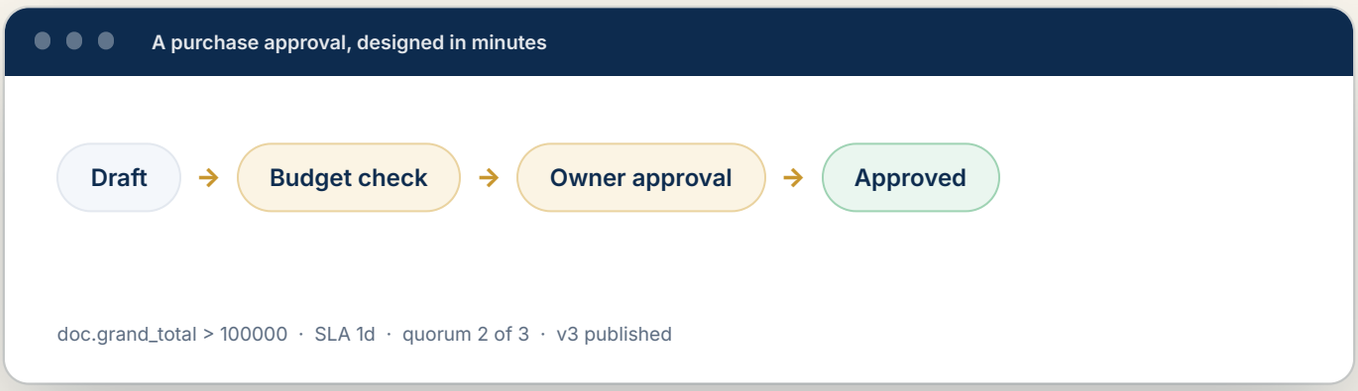

Approvals (single, any, all, quorum, sequential), tasks, parallel branches and time limits on business calendars, with escalation, versioning and simulation.

### Automation

When something happens, if a condition holds, then act: notify by bell, email or WhatsApp, create tasks, set fields, send PDFs or call a webhook. Test as a dry run first.

### Roles & access

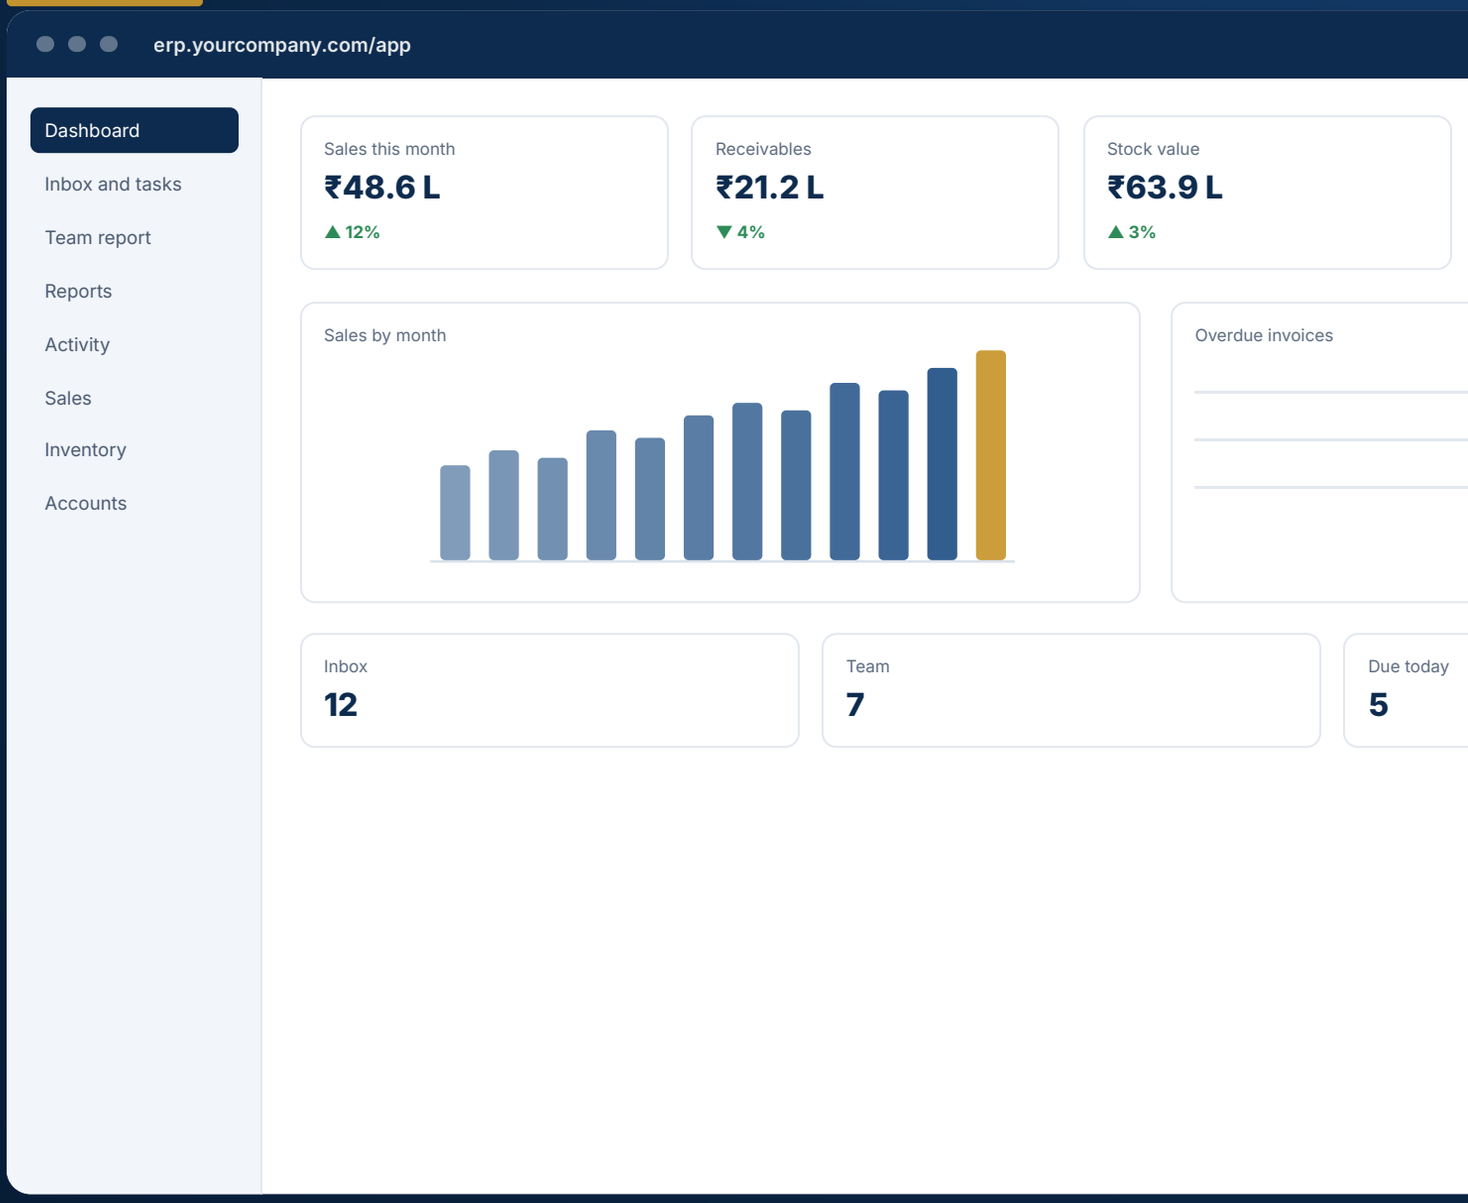

13 actions per record type, record scope by owner or branch, field rules that hide or lock data, and segregation-of-duties checks.

REAL-TIME INSIGHT

# See the whole business. As it happens.

Dashboards, reports and team views turn every transaction into decisions, on a desktop or a phone.

1 **Dashboards**

Number cards and charts of any record, with filters, by role.

2 **Report builder**

Columns, filters, totals and charts, grouped by financial year, quarter or month.

3 **Scheduled reports & alerts**

Reports emailed on a schedule, and alerts when a threshold is crossed.

4 **Inbox & tasks**

Approvals, workflow steps and tasks in one place for each person.

5 **Team report**

Who has what open, with overdue counts, before work slips.

6 **Activity & audit**

A live feed of what changed, and a tamper-evident trail behind it.

Illustrative screen. Figures are examples.

QILA PACKS

# Ready for your industry. In a day, not months.

A Qila Pack installs the modules, records, roles, workflows, print formats, reports, dashboards, automation and starting data an industry needs. Preview it first; it only adds, never overwrites.

### Retail shop
POS counters, barcodes, counter closing, returns and store dashboards.

### Trading & distribution
Price lists, credit limits, godowns, batches and collections.

### Manufacturing
BOMs, work orders, quality steps, yield and costing.

### Make-to-order
Job orders through design, production, QC and dispatch.

### Restaurant & café
Menus with recipes, table and takeaway orders, food cost.

### Hotel & guest house
Reservations, front office, folios and housekeeping.

### School
Admissions, fee structures, reminders and attendance.

### Clinic
Appointments, consultations, billing and pharmacy.

### Services & agencies
Projects, time, retainers and utilisation.

**New packs are added regularly, and Qila Experts build custom packs for your organisation.**

SECURITY & DATA SOVEREIGNTY

# Your data stays yours.

**Qila runs on your server. No business data, documents or backups ever leave it. The only outbound connection is a signed hourly licence check-in, and Qila shows you exactly what it sends.**

### Private deployment

Installed on infrastructure you control, in the region you choose. No vendor access.

### Two-factor sign-in

Authenticator codes, mandatory for administrators; PIN sign-in and idle lock for shared devices.

### Granular access

Roles, record scope and field rules decide who sees and changes what, down to a single field.

### Segregation of duties

Conflicting powers are flagged before they are granted to one person.

### Tamper-evident audit

Every change with who, when, IP, old and new values, hash-chained and verified.

### Encrypted backups

Encrypted with your own passphrase, scheduled, and restorable from the screen.

Helps you meet data-protection obligations under

India DPDP Act 2023 · UAE PDPL · Saudi PDPL · EU GDPR

RESPONSIBLE AI

# AI that assists. Never intrudes.

Qila's AI helpers are optional, use your own provider and key, and work within the permissions you set.

### Qadim

The AI setup helper. It interviews you about your business, proposes a configuration plan, and Qila validates it. Nothing is applied until an administrator approves, and every change is audited. Qadim never reads business data.

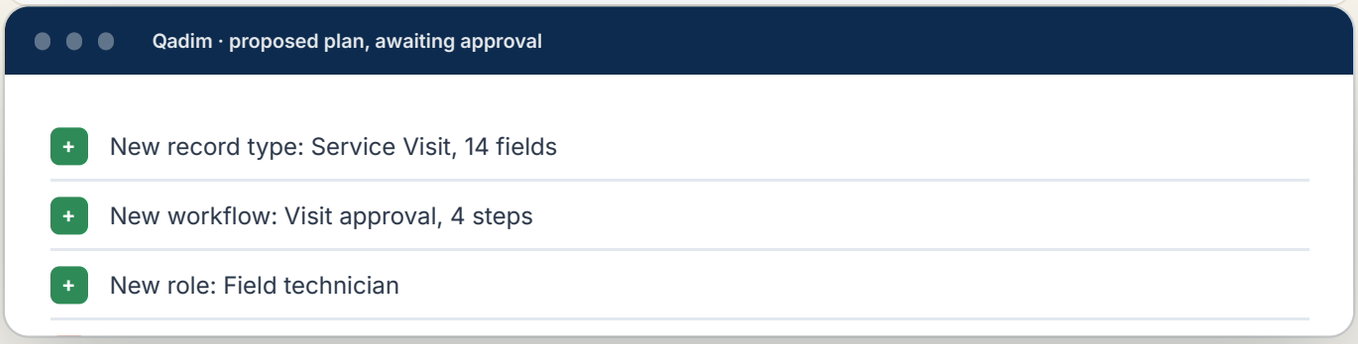

### Qila Qadim

The in-app assistant. It answers questions, builds reports and finds records, read-only, as the signed-in person. It stays off until an administrator switches it on.

YOUR CHOICE OF PROVIDER

Anthropic · OpenAI · Google Gemini · Mistral · DeepSeek · Groq · OpenRouter · Local models

- Keys stored encrypted
- Every request logged with its cost
- Monthly spending limit
- Identifiers such as PAN, GSTIN and account numbers stopped before sending

IMPLEMENTATION

# From first conversation to go-live.

Certified Qila Experts deliver your system on site or online, with a clear plan, a documented configuration and training for every role.

1. **Discover**
   Your processes, people, data and goals, mapped into a requirement list.
2. **Install**
   Qila deployed on your server, secured and health-checked.
3. **Configure**
   The right Qila Pack, tailored to your forms, approvals and reports.
4. **Migrate**
   Masters and opening balances imported and reconciled.
5. **Train**
   Hands-on sessions for each role, using your own data.
6. **Go live & support**
   Hypercare after launch, then ongoing support from your Qila Expert and ABR Studio.

### 3–5 days
Starter: one company, up to 10 users

### 2–4 weeks
Standard: up to 50 users

### 4–8 weeks
Advanced: multi-company, 100 users

Every client receives the complete Qila ERP User and Configuration Manual: 21 chapters from bookkeeping basics to expert configuration.
